

# McLam<sup>®</sup> Extra Clear Glass<sup>™</sup> (ECG) from McCoy's

A first in South Africa.

NEW  
FROM  
MCCOY'S

## Introducing a clear winner.

Clear glass like you've never seen it before. Even the clearest glass has a tint of green reducing light transmission. But not anymore – our newest product in the McCoy's range is startling in its clarity.

McLam<sup>®</sup> Extra Clear Glass<sup>™</sup> (ECG) is an extra clear, low-iron float glass that is practically colourless.

- Unrestricted views: the glass offers higher light transmission for outstanding visual clarity.
- Brilliant transparency: see true colours through the glass, even in thicker laminate combinations.
- Sunny disposition: McLam<sup>®</sup> Extra Clear Glass<sup>™</sup> (ECG) maximises passive solar gain allowing more heat through on cold days.
- Beautifully flexible: the glass can be used for interiors and exteriors in a range of applications.
- Can be toughened or laminated.
- Available in a variety of thicknesses.

## Features:

### Exterior brilliance

On projects where transparency and brightness are important, McLam® Extra Clear Glass™ (ECG) offers what no other glass can – a crystal clear solution. When used for facades and shopfronts, Extra White enhances true colours and maximises light transmission – even in thicker laminate combinations.

### A lighter clearer laminate

Laminated glass provides safety by marrying together multiple layers of glass and PVB interlayers – but this process exaggerates the green tint of the glass, making it look darker. McLam® Extra Clear Glass™ (ECG) makes this effect much less noticeable – greatly improving the aesthetics of laminated glass. This product is therefore ideal for shopfronts, balustrades, balconies, doors, partitions and stairs.

### Endless options

Designers are finding McLam® Extra Clear Glass™ (ECG) is the perfect product for applications where glass is used as a design feature, such as glass tabletops, shelving, shower screens and display cabinets. McLam® Extra Clear Glass™ (ECG) in laminated form offers the visual benefits coupled with the other benefits of a laminated product ie. safety and security.

### Applications

McLam® Extra Clear Glass™ (ECG) can be used for both residential and commercial applications, and works particularly well for retail applications like shopfronts.

**Specific components are used to enable Glass to function. Beware of imitations, as they may not give the intended, or equal performance. Ensure that you specify McLam® Extra Clear Glass™.**
